COLD STORAGE REPORT, JULY 1, 1961

Commodity summary

July 1 holdings of orange concentrate, frozen vegetables, and turkeys were at record levels for the date, according to the Crop Reporting Board. Stocks of orange juice, at 51 million gallons, were 19 percent above the July 1, 1956-60 average and 12 percent larger than on July 1 last year. During June, holdings increased 3 million gallons, a contrast to the 2-million gallon reduction a year earlier. Warehouse holdings of 771 million pounds of frozen vegetables on July 1 were 17 percent larger than the previous record for the date (1957) and compares with 564 million stored on July 1, 1960 and 575 million pounds, the average for this time of year. A contra-seasonal increase in turkey holdings, 13 million pounds, raised total stocks to 107 million pounds. About 29 percent of this supply was in West Coast warehouses. Last year turkey stocks declined 8 million pounds during June to 67 million on July 1 and the average change for June is a 5-million pound decline. Average July 1 stocks are 68 million pounds. Shell egg stocks of 364,000 cases, were the lowest on record for the date. The 112 million pounds of frozen eggs were the lowest stocks since July 1, 1936. Holdings of butter on July 1 totaled almost 50 percent more than average for the date and were one-third larger than a year earlier. A gain of 35 million pounds of American cheese raised holdings to 392 million pounds. This compares with 304 million stored on July 1, 1960 and 367 million, the average. Red meats declined less than usual as holdings were reduced about 5 percent compared with an average decline of 10 percent for this time of year. Stocks, at 499 million pounds, were still 16 percent below the July 1, 1960 level and 7 percent below average for the date.

General commodity movement

Product weight in refrigerated warehouses amounted to 4.5 billion pounds on July 1, up slightly from a month earlier and a record for the date. Holdings in freezer space also were at a record high for July 1 totaling 3.1 billion pounds, up 200 million pounds since June 1. Except for a reduction in pork stocks, weights of all other freezer items increased during the month. In cooler storage, product weight declined 5 percent during June to 1.4 billion pounds. Net declines in weights of apples, pears, vegetables, nuts and red meats were large enough to overcome net gains in stocks of the other cooler items

Storage occupancy in public warehouses

Utilization of both cooler and freezer space in public refrigerated warehouses increased during June. Cooler occupancy on July 1 was 54 percent, an increase of 1-percentage point since June 1. Occupancy on July 1 last year was 51 percent while the 5-year average is 53 percent. Declines in cooler occupancy in New England, East North Central, South Atlantic, West South Central, and Mountain States were more than offset by sharp increases in East South Central and Pacific States and moderate increases in Mid-Atlantic and West North Central regions. Freezer occupancy, at 71 percent on July 1, gained 3-percentage points during June. This occupancy compares with 66 percent a year earlier and the 5-year average of 65 percent. In the New England and Mountain States, occupancy remained unchanged from a month ago. In the South Atlantic, East South Central and West South Central regions, freezer occupancy declined but these decreases were more than offset by a sharp increase in the Pacific region and moderate increases in other areas.

Juices, fruits, and vegetables

Warehouse holdings of frozen orange concentrate reached an all-time record of 51 million gallons on July 1. This surpassed the previous record (July 1, 1959) by almost 3 million gallons. This time last year, 45 million gallons were stored, while 43 million is the July 1, 1956-60 average holdings. During June, stocks increased 3 million gallons which compares with a 2-million gallon decrease during June 1960 and the average June gain of 96,000 gallons. Frozen fruit stocks increased

sharply during June as a result of heavy seasonal gains in boysenberries and strawberries. By July 1, frozen fruits totaled 362 million pounds, about 14 percent more than a year earlier but 2 percent less than average. For June, the gain of 83 million pounds was about 28 percent larger than during June last year but 6 percent under the average. Stocks declines were reported for apples, blueberries, cherries, grapes, peaches and raspberries. Increased holdings were shown for apricots, boysenberries, strawberries and unclassified fruits. Boysenberry stocks increased 8 million pounds to 12 million while an 89-million pound gain in strawberries brought July 1 stocks to 188 million pounds. For the date, strawberry holdings were 8 percent larger than a year earlier but 8 percent under average. Seasonally, stocks of frozen vegetables increased less than average. The gain of 23 million pounds compares with 32 million, the average, and 19 million, the June increase a year ago. July 1 stocks of 771 million pounds were a record for the date and exceeded July 1, 1960 stocks by 37 percent and average holdings by 34 percent.

Poultry and poultry products

Stocks of shell eggs on July 1, at 364,000 cases, were a record low for the date. During June a net increase of 126,000 cases was reported but this fell short of the 357,000 cases-increase during June, 1960 and the average gain of 180,000 cases. Frozen egg stocks, 112 million pounds, were the lowest July 1 holdings since 1936. Stocks increased only 20 million pounds during June compared with the June 1960 increase of 35 million pounds and the average gain of 32 million. A 13-million pound net increase in turkeys brought holdings to 107 million pounds, 15 million more than the July 1 record of 92 million pounds set in 1957. For the date these stocks were over one half more than for both the average and a year earlier. Holdings of all poultry increased 19 million pounds to a total of 207 million. On July 1 a year ago, stocks totaled 150 million pounds compared with the 5-year July 1 average of 159 million.

Dairy products

A seasonal increase raised warehouse stocks of cream by 6 million pounds during June to 23 million pounds by July 1. Supplies for the date were about 7 million pounds below July 1, 1960 and the 5-year average. Butter holdings advanced more than usual during June. A 58-million pound gain raised warehouse supplies to 217 million pounds, 33 percent more than on July 1, last year and 49 percent more than the 5-year July 1 average. Government-owned butter reported on July 1 totaled 149 million pounds, leaving 68 million pounds in commercial channels. The commercial quantity a year earlier was 61 million pounds and the July 1, 1956-60 average is 63 million. Total stocks of cheese increased 37 million pounds during June and totaled 444 million pounds at the end of the month. This inventory was 29 percent above holdings on July 1, 1960 and 9 percent above average.

Meat and meat products

The seasonal reduction in warehouse stocks of red meats was less than usual due to a moderate contra-seasonal increase in beef and some pork items. The 24 million pound net reduction during June compares with a decline of 43 million a year earlier and the 5-year average decline of 58 million. July 1 stocks of beef, at 155 million pounds, were 7 percent above July 1, 1960 holdings and 15 percent more than average. During June, stocks increased 1 million pounds but during June last year, stocks declined 3 million pounds and the average change for the month is downward by about 7 million pounds. A 24 million pound net reduction in total pork stocks brought July 1 holdings to 244 million pounds. This compares with a 36-million pound decline during June 1960 and the average reduction of 46 million. Frozen pork declined 23 million pounds to 206 million pounds and cured pork was down 1 million to 38 million pounds. For the date, holdings of all pork were 30 percent below July 1, a year ago and 21 percent below average.
